

City of Fayetteville Building Safety Division

POLICY & PROCEDURE

Electrical Pedestals with Broken Seals

Electrical service must be authorized by the Building Safety Division before the Main Breaker seal is removed and the circuit energized.

Upon service approval, the inspector will remove the seal but will not close the breaker. It shall be the responsibility of the electrical contractor to energize the circuit.

If the inspector finds that a seal has been broken, he shall seal the breaker in the off position and make note on the electrical permit. If, upon subsequent inspection, he finds that the seal has again been removed he shall notify the utility provider to discontinue service.

Service shall not be restored until inspected and approved by the Building Safety Division.

Reason: Un-inspected and unauthorized use of electrical service presents a hazard to workers, neighbors and utility customers.
